DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species of the claimed invention: .

Species I: claims 1-2, 8-9, and 15 direct to an automatic control circuit comprising a gain variable amplifier, control signal generating means for level-detecting the receiving signal and then generating a feedback signal as the control signal, and controlling means for deciding a generation timing of the control signal or a generation period of the control signal in response to a predetermined physical quantity wherein controlling means include a look-up table which uses address information for decision.

Species II: claims 1, 3, 8-10, and 15 direct to an automatic gain control method for receiver with variable generation period of the control signal wherein controlling means decides according to a lapsed time.

Species III: claims 1, 4, 8-9, 11, and 15 direct to an automatic gain control method for receiver with variable generation period of the control signal wherein controlling means determines the period different when a power supply is turned on.

Art Unit: 2684

Species IV: claims 1, 5, 8-9, 12, and 15 direct to an automatic gain control method for receiver with variable generation period of the control signal wherein controlling means determines the period different when an intermittent receiving operation is carried out.

Species V: claims 1, 6, 8-9, 13, and 15 direct to an automatic gain control method for receiver with variable generation period of the control signal wherein controlling means using the amount of change in the detect output.

Species VI: claims 1, 7, 8-9, 14, and 15 direct to an automatic gain control method for receiver with variable generation period of the control signal wherein controlling means determines the period using the fading pitch detection means.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 8-9, and 15 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
